## 1 Important information for use of HL71

### 1.1 General

This document describes the HL7 structures and processing rules, which are important for the receipt and dispatch of messages via the HL7 Server.

In practice, HL7 messages and their fields are often customized to varying degrees. This document describes our default settings. For detailed inquiries about custom adjustments please contact [technicalsupport@karlstorz.com](mailto:technicalsupport@karlstorz.com).

### 1.2 Encoding of messages

The encoding is subject to HL7 rules. When receiving and sending messages, escape sequences are taken into account. The interpretation of ASCII codes above the value 128 ("8 bit ASCII") correlates to the configured encoding in the according receiver\provider. By default UTF-8 is used.

### 1.3 Dependency of versions

The HL7 Server is able to receive and send messages from HL7 versions 2.x. The present documentation uses HL7 v2.5. The data fields, which are relevant for working with the system, can be read from virtually any HL7 version.

### 1.4 Context of patients and cases

A message always refers to a single order/procedure for a single patient visit.

## 2 Transport layer

### 2.1 TCP/IP interface

The system offers a TCP/IP server for receiving and sending HL7 messages over MLLP (Minimal Lower Layer Protocol).

MLLP guarantees In Order delivery of HL7 content. MLLP supports all single-byte character encodings (e. g. iso-8859-x, cp1252) as well as UTF-8.

According message format characters (Begin of message, End of Message and Segment terminator) are configurable.

### 2.2 File transfer interface

While not enabled by default, the system can be configured to receive and send messages through text files.

When receiving and sending, either every message can be transmitted in a separate file or several messages can be transmitted in one single file.

## 3 HL7 import

For adopting patients and case data, the following HL7 message types can be processed by the system:

- ADT^A01 – Admit / Visit Notification
- ADT^A02 – Transfer a Patient
- ADT^A03 – Discharge / End Visit
- ADT^A04 – Register a Patient
- ADT^A05 – Pre-Admit a Patient
- ADT^A06 – Change an Outpatient to an Inpatient
- ADT^A07 – Change an Inpatient to an Outpatient
- ADT^A08 – Update Patient Information
- ADT^A34 – Merge Patient Information – Patient ID only
- ADT^A40 – Merge Patient – Patient Identifier List
- ORM^O01 – General Order Message

Apart from identifiers (patient, case), also name, first name and date of birth are transferred into system database and carried along in order to ensure a precise allocation. These values are also sent back during export, e.g. with ORU messages.

The HL7 Server reports an Accept Acknowledge (ACK) after receiving and successfully transforming the message. Negative Acknowledges (NACK) will be sent if the message type is unsupported or the content could not be transformed. Any failures after the initial message transformation (e.g. during further transmission) will not be propagated to the sending system.

All expected message segments and evaluated fields are described in the following chapters, based on HL7 version 2.5.

Legend of the table columns:

|              |  |
|--------------|--|
| SEQ          | Position of field in pertinent segment   |
| LEN          | Maximum field length   |
| DT           | Data type of field   |
| OPT          | Optionality – R=essential, X=not used, B=included for backward compatibility, O=optional |
| RP/#         | Repetition allowed   |
| TBL#         | List of values, reference to HL7-table with vocabularies for the field                   |
| ITEM#        | Clear ID of this field in HL7-standard   |
| ELEMENT NAME | Description of field   |

ID fields are required to be filled, so that the affiliated data can be properly stored, e.g. a patient will not be stored without a patient ID. If such fields are optional or not is than dependent on further information.

### 3.1 MSH – message header

| <b>SEQ</b> | <b>LEN</b> | <b>DT</b> | <b>OPT</b> | <b>RP/#</b> | <b>TBL#</b> | <b>ITEM #</b> | <b>ELEMENT NAME</b>                     |

Transferred into system database:

|        |  |
|--------|--|
| OBR-4  | Type of procedure (code^text)  |
| OBR-7  | Start of procedure (date)  |
| ORC-8  | End of procedure (date) (suggested, only used if ORC 7.3 is empty)   |
| OBR-12 | Danger/Risk Information (free text, no subsegments)  |
| OBR-13 | Additional Information   |
| OBR-18 | Additional Information   |
| OBR-19 | Additional Information   |
| OBR-20 | Assigned Room comment (free text) – only on ORM  |
| OBR-32 | Additional involved personnel<br>(ID^name^first name^middle names^suffix^prefix^^^^^^^^^street^-<br>postal^city^country^state) |
| OBR-33 | Additional involved personnel<br>(ID^name^first name^middle names^suffix^prefix^^^^^^^^^street^-<br>postal^city^country^state) |
| OBR-34 | Additional involved personnel<br>(ID^name^first name^middle names^suffix^prefix^^^^^^^^^street^-<br>postal^city^country^state) |

The roles performed by the additional personnel in OBR 32-34 can be customized per installation (one role per field). In OBR-20 a character sequence may be used to signify a line break in displays. This sequence is configurable.

## 4 HL7 export

The system sends an export message when a report is generated or updated.

The message types below are used for exporting by default:

- ORU^R01 – transmit result

The following chapters list all fields that are filled in export messages by default.

### 4.1 MSH – message header

|        |                      |
|--------|----------------------|
| MSH-3  | Sending App          |
| MSH-5  | Receiving App        |
| MSH-7  | Date/Time of message |
| MSH-9  | Message Type         |
| MSH-11 | Processing ID        |
| MSH-12 | Version ID           |

### 4.2 PID – patient identification

|       |   |
|-------|---|
| PID-2 | Patient-ID  |

OBR|1|O20200511095841||SURG^Surgery|||20200510103202|20200510114500|||||||F|
```

Note that all data in this message is fictional.

For better recognition HL7 line beginnings have been marked in bold font.

## 6 Additional hints

The received information will be used in other systems and protocols as well. Those may imply additional restrictions on certain values, such as identifiers or codes. The most notable of such protocols is the DICOM protocol.

It is suggested, to restrict identifiers and codes to no more than 16 characters, to not use whitespaces or special characters of any kind and at least for codes to use only uppercase characters of the ASCII set.
